

Legal Collaboration Platform. Production-ready Foundation.

Connecting firm knowledge, people and matters, finally in one place.

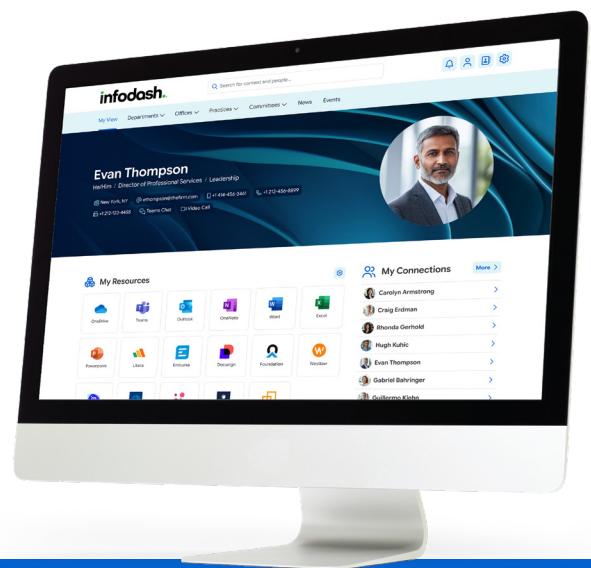

Infodash is the governed, production-ready foundation built on Microsoft 365, connecting the systems your firm already runs on giving both your team and your clients a clear view of what matters.

Infodash for Your Digital Workplace Every System. One Interface.

A firm-wide intranet, ready on day one. Attorney directory, matters and news, unified across HRIS, DMS, ERM, practice management and M365 graph. No SharePoint sprawl. No custom build needed.

Infodash for Client Collaboration Same Source of Truth. Shared Securely.

Clients don't want to email you to find out where their matter stands. Infodash gives them real-time access to matter status, financials, documents, and relevant regulatory industry-specific knowledge through a secure portal. The same Infodash foundation is extended securely to clients. You control exactly what's shared and what stays internal.

ONE GOVERNED FOUNDATION · BUILT ON MICROSOFT 365 · DEPLOYED IN YOUR AZURE TENANT

WHY ONE PLATFORM MATTERS

Production-ready
faster

Built for Large Law
Firm Complexity

Firm data stays in
your tenant

Copilot-ready
governance

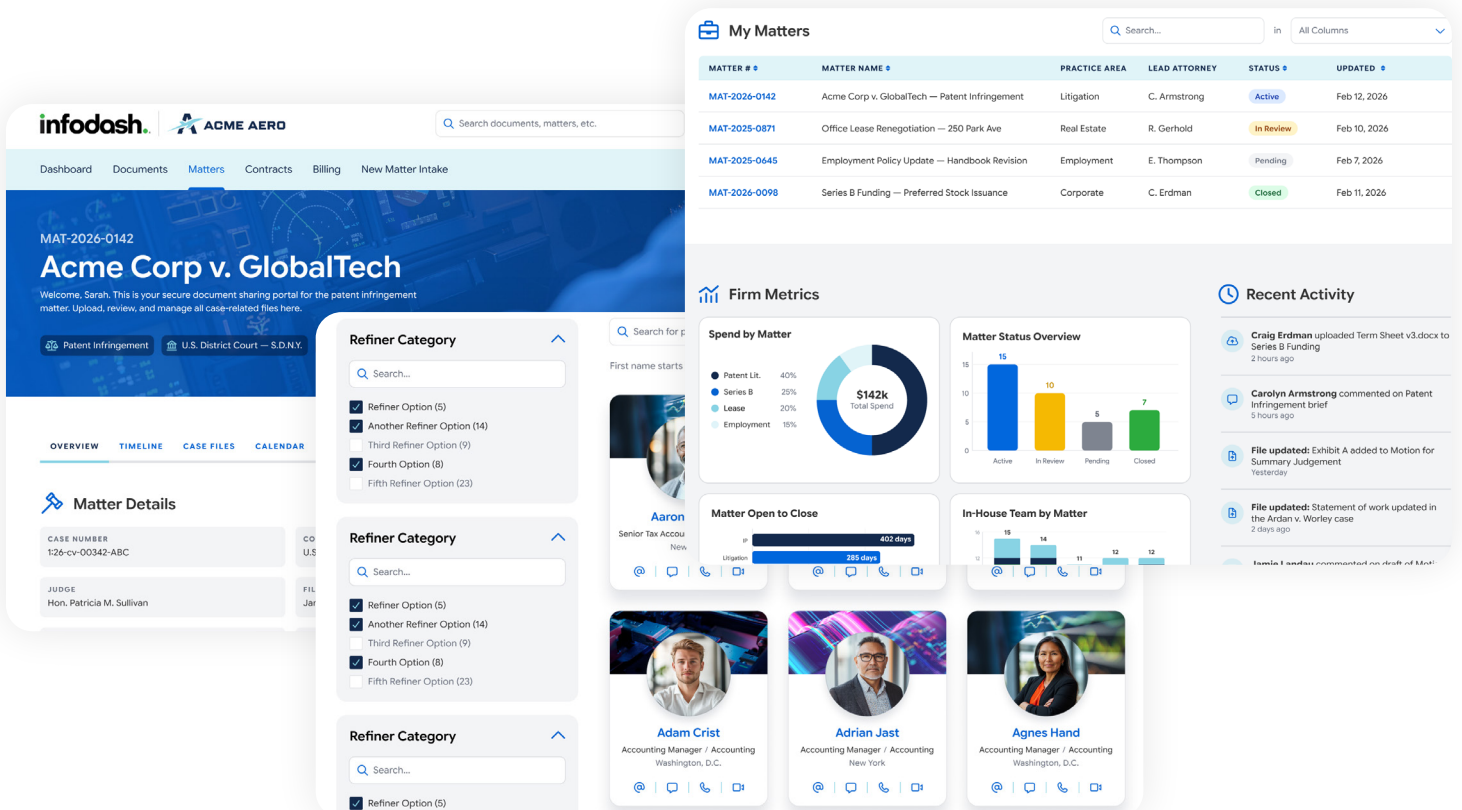

Custom dev not
needed

The Foundation Keeps Expanding

Three new capabilities extending the same governed platform.

DMS PUBLISH

Your DMS and your client portal shouldn't require someone to manually copy files between them.

Syncs documents from iManage, NetDocuments, and other DMS platforms into Infodash workspaces. No duplication, no version conflicts. You control what clients see and when.

AI STUDIO

AI built safely within the guardrails your firm defines, not the other way around.

Azure OpenAI models running through a secure, unified API. Firm-defined guardrails. Every interaction stays inside your tenant.

INFODASH AUTOMATE

Manual handoffs between your DMS, CRM and practice management systems are where work breaks down.

Automate connects those systems so data moves on its own. No one has to remember to update three places every time something changes.
